

JULY 26th

On this day in...

2009: A long period four foot south swell generated high surf and strong rip currents from 7/24 to this day. Eight to ten foot surf with sets to 12 feet were observed at many south facing beaches, and sets up to 20 feet reported in the most favorable locations. The high surf also generated strong rip currents, which were responsible for hundreds, or even thousands, of rescues throughout Southern California. Structural damage and one death occurred.

Lucerne Valley got hit with a thunderstorm highlighted by sunset on this day in 2009.

2006: A thunderstorm produced one inch hail southeast of Julian.

1996: Surf from seven to ten feet with sets to 12 feet occurred from 7/24 to this day. It was generated by an intense South Pacific storm south of Tahiti. More than 500 rescues were made at Southern California beaches.

1956: Strong monsoon flow hit the region with thunderstorms each day from 7/23 to 7/28, even west of the mountains. Damage and flooding occurred on most of these days.
